

PERFECT PARTNERS

YAMAHA outboards are world-renowned for their turnkey reliability and amazing performance; and YAM inflatables are specially designed to be the perfect match - from the unique underwater profile to the optimised angle and height of the transom. What's more, there's a huge range of Yamaha outboards to choose from, so you're sure to easily find the ideal combination of engine and inflatable to match your boating style.

BUILT TO LAST

For maximum strength and good looks, all YAM inflatables are constructed using the latest generation HEYTEX PVC material and all seams and joints are glue-bonded, for optimum water tightness and safety. The result is a smart, clean exterior surface that is highly resistant to abrasion, salt water and sunlight.

BUILT TO TAKE THE PRESSURE

A cleverly designed air baffle system is incorporated into the hull tubes of all YAM inflatables, which not only helps keep the individual chambers completely sealed for safety, but works to maintain and equalise air pressure throughout the tube. Amongst other things, this also allows your boat to absorb minor impacts without major problems!

BUILT TO TAKE CARE OF YOU

In addition to the many safety features like strong, secure grab-handles, seat patches, D-rings, lifting eyes and other fittings, we also look after your comfort and enjoyment as a top priority. Take our ingenious, high quality air valve - it's exceptionally reliable and airtight, very easy to operate, and is flush with the surface of the tube to prevent snagging or discomfort.

TRANSPORTING YOUR YAM IS A BREEZE!

In addition to the many safety features like strong, secure grab-handles, seat patches, D-rings, lifting eyes and other fittings, we also look after your comfort and enjoyment as a top priority. Take our ingenious, high quality air valve - it's exceptionally reliable and airtight, very easy to operate, and is flush with the surface of the tube to prevent snagging or discomfort.

INFLATABLE KEEL

The special inflatable keel and V-hull design give great directional control with very precise handling and quick onto-the-plane performance, while the double-wall inflatable floor is a revolution in comfort.
